EDUCATION

BSCS - University of Engineering and Technology, Lahore - CGPA (3.3) Graduation Year (2026)

Coursework: Data Structures & Algorithms, Database Systems, Artificial Intelligence, Software Engineering

PROJECTS

Work Nexus <https://worknexus-indol.vercel.app> (MERN + JIRA)

Worked as a frontend developer in a 4-member team on an HR and Payroll Management System. Designed and implemented the employee management module, leave dashboard, and analytics screens. Handled full API integration for real-time data and ensured a responsive, user-friendly UI. Collaborated in Agile sprints to meet deadlines and maintain code quality.

Ecommerce App (MERN Stack) <https://github.com/Sami-143/e-Commerece-App>

My Ecommerce App is a full-stack web application built using the MERN stack (MongoDB, Express.js, React.js, Node.js) and deployed on Heroku. It includes features like user authentication, product management, cart, and order handling. The app connects to MongoDB for data storage and uses React for a dynamic frontend experience.

Traffic Accident Alerting System App, <https://github.com/Kazim68/Traffic-Accident-Alerting-System> (Flutter + Sensors)

Developed a Flutter-based mobile app that detects accidents using accelerometer and gravity-filtered data. Sends automated SOS alerts and makes emergency calls upon accident detection after a 10 second alarm timer. Designed as a fully offline app with real-time local sensor analysis- lightweight and efficient.

DSA Projects <https://github.com/Sami-143/mini-excel> <https://github.com/Sami-143/DOSS-SHELL> (in C++)

- **Dos-Shell with Text Editor:** Built a command-line shell with file handling and editing capabilities.
- **Console-based Excel:** Implemented Excel-like functionality in the terminal with basic formula parsing.

Google Docs Clone, <https://github.com/Sami-143/Google-docs-clone>

Users can create and securely store documents, collaborate in real time with instant sync across clients, and enjoy rich text editing features like formatting and image insertion using the Quill editor.

Google Playstore Analysis <https://www.overleaf.com/project/673b79f3567f7c99f881adb5>

Analyzed Google Play Store data to predict app ratings. Engineered features from installs, reviews, size, and price. Used XGBoostRegressor for imputation and rating prediction, achieving 95% data completeness after cleaning and preprocessing.

ALPD and Verification System <https://github.com/Sami-143/Information-Security-Project>

Developed a web-based license plate detection system using deep learning and computer vision with integrated security measures for real-time and secure vehicle identification

SKILLS

Languages: JavaScript (Node.js, React, Redux), Python, SQL, C++, C#, Dart

Databases: MongoDB, MySQL, MSSQL

Frameworks & Tools: Express.js, Git, JIRA, Tailwind CSS, GitHub, Postman

Concepts: REST APIs, Fast API, Role-Based Access Control (RBAC), CI/CD, System Design, Agile Software Development

Data & ML: Pandas, numpy, scikit-learn, jupyter

ACHEIVEMENTS & CERTIFICATIONS

JavaScript Algorithms and Data Structures | freeCodeCamp | SQL (Basics/Intermediate/Advance) | Hackerrank AWS-Cloud-Practitioner | DataCamp | Linux Fundamental TrainWith Shubham | LeetCode 85+ Problems | Earn 2 badges including 50+ days at LeetCode | Lead More than 5 Events about Tech |
